Home fires occur more in winter than in any other season. As you stay cozy and warm this winter season, be fire smart!

**Half of all home heating fires** occur in the months of December, January, and February.

Heating equipment is involved in 1 in every 7 reported home fires and 1 in every 6 home fire deaths.

Keep heated vents and radiators clear of any material that can burn.

Keep portable generators outside, away from windows, and as far away as possible from your house.

Install and test carbon monoxide alarms at least once a month.

Keep anything that can burn at least 3 feet from any heat source like fireplaces, wood stoves, radiators, or space heaters.

Have a qualified professional clean and inspect your chimney and vents every year.

Store cooled ashes in a tightly covered metal container, and keep it outside at least 10 feet from your home and any nearby buildings.

Plug only 1 heat-producing appliance (such as a space heater) into an electrical outlet at a time.
