

# XSC Regional Intterra

# Risk Management

# Pivoting to Data

# It's incumbent upon us in the fire service to be data driven...

- Encompasses:
  - My agency- Operational data, CAD, GIS, community awareness & understanding
  - My mutual aid partners & THEIR operational systems
  - Fusion between data sets/vendors/partners
  - Moving beyond the metrics and considering people
  - Sharing operational data regionally can improve outcomes merely by providing immediate situational awareness

# Crews and Company Officers

Situational awareness and performance self management

# Any Crew, Anytime, Anywhere with XSC Regional Intterra

# Real-time regional data sharing & situational awareness

The screenshot displays the Intterra Maps interface. The main map shows Colorado Springs with various incident markers: a red fire icon with '0' and a blue heart icon with '0'. A green heatmap overlay indicates resource density. The sidebar on the left provides a search bar and a 'CAD SitStat Monitor' section showing 2 incidents and 98% available resources. Below this, incident categories are listed: 'Brush Fire' (No Units, just now) and 'Chest Pain/Heart Problems' (No Units, a minute ago). The 'AVAILABLE RESOURCES' section shows a bar chart for Engine (25), Medic/Ambulance (6), Water Tender (6), Car (4), and Chief (2).

# Real time data in a simple format changes outcomes.

- When you fight to access data it delays response and complicates mutual aid.
- Through Intterra, access to critical operational data in a simplified view changes how we are able to make decisions, improving our ability to serve the community.
